**Defensive Driver
Training Programme**

HSE 4wd & Light Vehicle Land Transport Risk Assessment

- Driving related incidents are the single largest cause of fatalities in the Oil and Gas Industry company operations and similar Commercial operations.
- Studies conducted by the World Health Organisation predict that road deaths will increase and, that by 2010 they are heading towards becoming the second largest contributor to mortality globally.
- Considering this forecast it has been recommended that “Best Practice” Defensive Driver Training be adopted to address this issue in areas where companies and their contractors/sub contractors operate.

- The main objective of the *Xplorability* Driver Training Transport Risk Assessment Programme for 4wd and Light Vehicle Operations is to help reduce, and ultimately eliminate, the number of serious road traffic incidents, injuries and fatalities by reviewing your company's current policy and offering guidance on how to implement land transport safety elements in a management system which is consistent with the Industry recommendations.
- **Does Your Company have Risk Awareness?**

Does this Include Your Contractors/Sub Contractors?

- Industry recommendations are that Training and Guidance are provided by Management to all Company, Contractor/Sub Contractor Drivers operating on Company Roads and Premises, Public Roads and Public Areas when on Company business.
- This also extends to Gravel/Piste Roads and Off Road Exploration Areas.

- **Have all Drivers on Your Projects had formal and recent Defensive Driver Training?**
- Your Drivers/Contractors/Sub-Contractor Drivers must be appropriately licensed, trained and have the functional capacity to operate your vehicles at all times.
- **Do all the Vehicles, Owned, Hired or Leased by You for Your Projects conform to the recommended Operational Specification and Safety Standards?**
- All Vehicles working on Your Company Projects should be fit for the purpose on an assessment of usage, and be maintained in a safe working order in line with manufacturer's specifications and local legal requirements as well as offering the benefit of additional of Rollover protection where operational terrain Risk Assessment demonstrates the need. All necessary safety, recovery and security equipment should also be carried.

- *The Driver Training Programme together with our HSE Risk Assessment of your 4wd and Light Vehicle Transport Policies will assist Your Management Team to conform to Your Industry requirements.*
- *Contact **Xplorability** Training Team Manager Paul Sinkinson to discuss your requirements.*
